Contents

1 Introduction 1
1.1 Quartz Crystal as a Sensor 1
1.1.1 Brief Historical Review 1
1.1.2 Quartz Crystal Sensor Fundamentals: Models 7
1.2 AC Electrogravimetry Technique Fundamentals 15
1.2.1 General Electrogravimetry 16
1.2.2 AC Electrogravimetry 18
1.2.2.1 Overview 18
1.2.2.2 Charge Transfer and Mass Transfer Modelling 21
1.2.2.3 Typical Graphical Responses 27
1.3 Frequency Measurement Techniques 33
1.3.1 Frequency Counters 33
1.3.2 Phase Locked Loop, PLL 37
1.4 Current AC Electrogravimetry experimental setups 38
1.4.1 Problem outline 38
1.4.2 Specific problems associated with the AC experimental setups 40
1.5 Summary 44

2 Objectives 47
2.1 General Objective 47
2.2 Specific Objectives 47

3 Contributions 49
3.1 Contribution I: First Approach by using a Analog/Digital Phase Locked Loop. 49
3.1.1 General Block Diagram 49
3.1.2 Description of the System Operation 50
3.1.3 Drawbacks associated to the first contribution 52
3.2 Contribution II: Analogue-Digital Phase Locked Loop (A-D PLL). Instrumentation system proposed for frequency monitoring in the AC Electrogravimetry experimental technique 53
3.2.1 Measuring strategy 53
3.2.2 General description of the system proposed 54
3.2.2.1 General block diagram 54
3.2.2.2 Operating principle outline 55
3.2.3 Theoretical Model of the system designed 56

3.2.4 Detailed description of the system designed 60
3.2.4.1 Main Mixer..... 60
3.2.4.2 Low pass integrator filter 62
3.2.4.3 Signal conditioning subsystem..... 63
3.3.4.4 Voltage Controlled Crystal Oscillator, VCXO..... 66
3.2.4.5 Secondary mixer..... 66
3.2.4.6 Numerically Controlled Oscillator, NCO..... 67
3.2.4.7 Field programmable gate array, FPGA 70
3.2.4.8 Complete system assembled..... 77

4 Materials and Methods 79
4.1 Design and simulation tools..... 79
4.1.2 A-D PLL simulation script 79
4.1.2 A-D PLL circuit simulation..... 81
4.1.3 PCB design..... 82
4.1.4 NCO design and simulation tools..... 85
4.1.5 FPGA design and simulation tools 86
4.1.6 System box design..... 87
4.2 Chemical instrumentation associated..... 88
4.2.1 Electrochemical cell..... 88
4.2.2 Potentiostat 90
4.2.3 Quartz Crystal Microbalance Electrodes 90
4.2.4 Polymers and solutions..... 91
4.3 Electronic instrumentation associated..... 92
4.3.1 Transfer Function Analyser, TFA..... 92
4.3.2 Specific instrumentation software 93
4.3.3 Digital Scope 93
4.3.4 Frequency meter 94
4.3.5 Signal generators 94
4.3.6 Other instruments..... 95
4.4 Experimental methodology 96
4.4.1 Static characterisation..... 96
4.4.2 Dynamic characterisation 97
4.4.3 Experimentation with polymers 99

5 Results and Discussion 103
5.1 System Simulation Results 103
5.1.1 Results of the A-D PLL simulation script 103
5.1.2 Results of the A-D PLL circuit simulation..... 106
5.2 Characterisation Results 109
5.2.1 Preliminary Characterisation 110
5.2.2 Static Characterisation..... 112

5.2.3 Dynamic Characterisation 114
5.3 Experimentation Results 121
5.3.1 Experimentation with Polypirrole 121
5.3.1.1 Frequency response results 122
5.3.1.2 Nyquist response results 125
5.3.2 Experimentation with Prussian Blue 129
5.3.2.1 Frequency response results 129
5.3.2.2 Nyquist response results 132
5.3.3 Experimentation with Polyaniline 136
5.3.3.1 Frequency response results 136
5.3.3.2 Nyquist response results 139
5.4 Summary 143

6 Future Research Lines 145
6.1 Electronic System including a QCM Sensor 145
6.2 Autonomous QCM sensor system 147
6.3 Electrochemical characterisation systems 148
6.4 Opening a research line in biosensors investigated by QCM techniques 148

7 Conclusions 151

Appendix I: Electronic Interface Systems for AT-cut QCM Sensors 155
I.1 Impedance or Network Analysis 158
I.2 Decay and Impulse Excitation Methods 159
I.3 Oscillators 163
I.4 Parallel Capacitance Compensation Techniques 166
I.5 Transfer Function Method 167
I.6 Summary 169

Appendix II: VHDL code programmed in the FPGA 171
