

Content

General introduction	5
1.1 Supramolecular Chemistry.....	7
1.2 Molecular recognition: Molecular chemical sensors	9
1.3 Organic-inorganic hybrid materials.....	13
1.3.1 Effect of pre-organization onto surfaces.....	14
1.4 Mesoporous materials.	19
1.4.1 Synthesis of mesoporous materials.	20
1.4.2 Functionalization of MCM-41 scaffolds: Obtention of organic-inorganic hybrid materials.	24
1.4.3 Applications of Organic-Inorganic Mesoporous Hybrid Materials.	27
1.4.4 Molecular Gates.....	27
1.4.4.1 Light-Driven Molecular Gates	31
1.4.4.2 Redox-Driven Molecular Gates.....	35
1.4.4.3 pH-driven Molecular Gates	40
1.4.4.4 Temperature-Driven Molecular Gates	47
1.4.4.5 Chemical triggers: Bio-molecules and small ionic species.	49
1. Control Access to silica surfaces. An approximation to ion-channels.....	57
1.1 Introduction.....	59
1.2 Objectives	66
1.3 Design of the system.....	66
1.3.1 Reactive center (R) and indicator (D) selected.	68
<i>Colorimetric sensing of pyrophosphate in aqueous media using bis-functionalised silica surfaces</i>	73
<i>Selective Chromo-fluorogenic Sensing of Heparin by using Functionalised Silica Nanoparticles Containing Binding Sites and a Signalling Reporter</i>	99

Selective and sensitive chromo-fluorogenic sensing of anionic surfactants in water using functionalised silica nanoparticles. 119

2. Determination of methylmercury using capped mesoporous inorganic materials..... 137

- 2.1 Introduction 139
- 2.2 Mercury species and their bioaccumulation. 140
- 2.3 Squaraine-thiol derivative: An ideal reactive receptor unit for mercury species... 142
- 2.4 Objectives. 143

A method for the determination of methylmercury in real samples using organically capped mesoporous inorganic materials capable of signal amplification 145

3. Controlled delivery systems using antibody-capped mesoporous nanocontainers 165

- 3.1 Introduction 167
 - 3.1.1 Antigens and antibodies: key molecules in immunoassays. 168
 - 3.1.1.1 Antigens. 168
 - 3.1.1.2 Design of haptens 169
 - 3.1.1.3 Antibodies obtention: Immunization of animals. 170
 - 3.1.1.4 Structure of antibodies. 171
 - 3.1.1.5 Antigen-antibody binding 173
 - 3.1.2 Immunochemical methods. 174
 - 3.1.2.1 Enzyme Linked Immunosorbent Assay 174
- 3.2 Objectives. 177

Controlled Delivery Systems Using Antibody-Capped Mesoporous Nanocontainers 179

***Antibody-Capped Mesoporous Nanoscopic Materials: Design of a Probe
for the Selective Chromo-Fluorogenic Detection of Finasteride 209***

**Selective and sensitive detection of TATP with antibody-gated dye
delivery from mesoporous hybrid nanoparticles in a lateral flow assay..... 235**

**4. Controlled Delivery using oligonucleotide-capped mesoporous
silica nanoparticles..... 269**

4.1 Introduction..... 271

4.1.1 DNA, a key object in life..... 272

4.1.2 DNA sensing: Immobilization of DNA onto solid supports..... 275

4.1.2.1 Stimuli controlled release employing nucleic acids..... 276

4.2 Objectives 280

***Controlled Delivery Using Oligonucleotide-Capped Mesoporous Silica
Nanoparticles 281***

5. Conclusions and perspectives 299

Conclusiones y perspectivas..... 303
