

Index

CHAPTER 1. INTRODUCTION	1
1.1. TRANSITION TO A SUSTAINABLE SOCIETY: TOWARDS NET NEGATIVE CO₂ EMISSIONS	3
1.1.1. Prospects in the energy sector	6
1.1.2. Strategies for carbon dioxide removal	8
1.1.2.1. <i>Carbon Capture and Storage (CCS)</i>	10
1.1.2.2. <i>Carbon Capture and Utilization (CCU)</i>	11
1.2. METHANOL: CURRENT PROSPECTS AND CHALLENGES	13
1.2.1. The so-called methanol economy	13
1.2.2. Methanol versatility: condense energy vector and platform for chemicals production	15
1.2.2.1. <i>Methanol in fuel applications</i>	16
1.2.2.1.1. <i>Methanol as fuel and fuel precursor for ICE</i>	17
1.2.2.1.2. <i>Methanol as energy carrier in fuel cells</i>	19
1.2.2.2. <i>Methanol as platform chemical</i>	20
1.2.3. Methanol production routes	22
1.2.3.1. <i>Syngas production from natural gas</i>	27
1.2.3.2. <i>Syngas production from coal</i>	30
1.2.3.3. <i>Syngas from renewable sources</i>	32
1.2.3.4. <i>Direct CO₂ hydrogenation to methanol</i>	35
1.2.3.5. <i>Power-to-methanol technology</i>	40
1.2.2.6. <i>Alternative methanol production routes</i>	43
1.3. THE IMPORTANCE OF CATALYST DESIGN IN INDUSTRY	45
1.3.1. Peripheral catalysis	49

1.3.1.1. <i>Metal-oxide interface</i>	50
1.3.1.2. <i>Metal-metal interface</i>	52
1.3.1.3. <i>Oxide-oxide interface</i>	53
1.3.4. Cooperation of different types of sites in heterogeneous catalysis: intersite transport and (nano)spatial effects	54
1.4. REFERENCES	58
CHAPTER 2. OBJECTIVES	71
CHAPTER 3. EXPERIMENTAL METHODS	77
3.1. MATERIALS SYNTHESIS	79
3.1.1. Synthesis of catalysts with tailored surface Lewis acidity (Cu/MO _x @Al ₂ O ₃)	79
3.1.1.1. <i>Synthesis of the mesoporous γ-Al₂O₃ carrier</i>	79
3.1.1.2. <i>Synthesis of the MO_x@Al₂O₃ oxide overlayer materials</i>	79
3.1.1.3. <i>Synthesis of Cu/MO_x@Al₂O₃ catalysts</i>	80
3.1.2. Synthesis of ZrO ₂ -supported Cu nanoparticles (Cu/ZrO ₂)	81
3.1.2.1. <i>Synthesis of the nanosized ZrO₂ carrier</i>	81
3.1.2.2. <i>Synthesis of the Cu/ZrO₂ catalysts</i>	81
3.1.3. Synthesis of catalysts with a modified Geodesic surface distance (Cu/SiO ₂ -ZrO ₂)	81
3.1.3.1. <i>Spherical SiO₂ support materials</i>	81
3.1.3.2. <i>Cu/SiO₂ materials</i>	82
3.1.3.3 <i>Cu/SiO₂-ZrO₂ composite model catalysts</i>	83
3.2. CHARACTERIZATION METHODS	84
3.2.1. Inductively Coupled Plasma Optical Emission spectroscopy (ICP-OES)	84

3.2.2. Powder X-Ray Diffraction (XRD)	85
3.2.3. Nitrogen physisorption	86
3.2.4. Determination of the Surface Lewis acidity (Ultraviolet-Visible (UV-Vis) spectroscopy coupled with the adsorption of a probe molecule)	88
3.2.5. X-Ray Photoelectron Spectroscopy (XPS)	90
3.2.5.1. <i>Particle size quantification by the Kerkhof-Moulijn model</i>	92
3.2.6. Low Energy Ion Scattering Spectroscopy (LEIS)	95
3.2.6.1. <i>Determination of supported metal particle size, surface density and spacing from LEIS data: the Spherical Cap Model (SCM)</i>	97
3.2.7. Electron Microscopy techniques	99
3.2.7.1. <i>(Field Emission) Scanning Electron Microscopy ((FE)SEM)</i>	100
3.2.7.2. <i>High-Angle Annular Dark-Field Scanning-Transmission Electron Microscopy (HAADF-STEM).</i>	100
3.2.8. N ₂ O-Temperature Programmed Reduction (N ₂ O-TPR)	102
3.2.9. Infrared Spectroscopy (IR)	104
3.2.9.1. <i>Fourier-Transformed Infrared Spectroscopy (FTIR)</i>	106
3.2.9.2. <i>In situ FTIR under controlled reaction atmospheres: In situ CO_x hydrogenation and temperature-programmed-hydrogenation (H₂-TPH)</i>	108
3.2.9.3. <i>FTIR coupled with the adsorption of probed molecules: CO surface titration at cryogenic temperatures (CO-FTIR)</i>	110
3.2.9.4. <i>Modulation-Excitation Diffuse-Reflectance Infrared Fourier Transform Spectroscopy (ME-DRIFTS)</i>	112
3.2.9.5. <i>In situ CO_x hydrogenation FTIR spectroscopy combined with the adsorption of CO at cryogenic temperature</i>	117
3.2.9.6. <i>In situ CO₂ hydrogenation FTIR spectroscopy</i>	119
3.2.9.7. <i>Operando H₂-MES-DRIFT spectroscopy assessment under CO₂ hydrogenation conditions</i>	120

3.3. CATALYTIC TESTING	122
3.3.1. Analytics: Gas chromatography (GC)	125
3.3.2. Quantification and kinetic analyses	127
3.4. COMPUTATION MODELLING	129
3.5. REFERENCES	131
CHAPTER 4. OXIDE PROMOTION EFFECTS IN Cu-SUPPORTED NPs FOR METHANOL SYNTHESIS BY CO₂ AND CO HYDROGENATION	137
4.1. INTRODUCTION	139
4.1.1. Mechanistic proposals	140
4.1.2. Nature and role of actives sites	141
4.1.2.1. <i>Oxide Lewis acid centers as a key site</i>	142
4.1.3. The nature of the carbon source	144
4.2. APPROACH	145
4.3. RESULTS AND DISCUSSION	146
4.3.1. Physicochemical characterization of model oxide-supported Cu catalysts	146
4.3.1.1. <i>MO_x overlay nanostructure and textural properties</i>	146
4.3.1.2. <i>Surface Lewis acidity</i>	150
4.3.1.3. <i>Copper dispersion</i>	151
4.3.2. Catalytic performance in CO _x hydrogenation reactions	154
4.3.2.1. <i>Influence of peripheral oxide Lewis acidity on the kinetics of CO_x hydrogenation to methanol</i>	154
4.3.2.2. <i>Kinetic isotopic effect</i>	159
4.3.3. <i>In situ</i> CO _x hydrogenation Infrared Spectroscopy	163
4.3.3.1 <i>In situ FTIR-TPH under CO₂ hydrogenation conditions.</i>	165

4.3.3.2 <i>In situ FTIR-TPH under CO hydrogenation conditions.</i>	166
4.3.4. Site occupation under CO _x hydrogenation conditions studied by FTIR(-TPH) and CO surface probing	169
4.3.4.1. <i>Occupation of cus Lewis acid centres on the oxide support</i>	173
4.3.4.2. <i>Occupation of surface hydroxyl groups on the oxide support</i>	175
4.3.4.3. <i>Occupation of Cu sites</i>	177
4.4. CONCLUSIONS	179
4.5. REFERENCES	181
CHAPTER 5. ENGINEERING THE CATALYSIS-RELEVANT PERIPHERY AT THE INTERFACE OF METAL AND OXIDE CATALYSTS FOR METHANOL SYNTHESIS BY CO₂ HYDROGENATION	187
5.1. INTRODUCTION	189
5.2. APPROACH	192
5.3. RESULTS AND DISCUSSION	192
5.3.1. Catalyst design and characterization	192
5.3.2. Catalytic performance	200
5.3.1. <i>Operando</i> CO ₂ hydrogenation infrared spectroscopy. Dynamics assessment by Modulation-Excitation DRIFT spectroscopy	204
5.4. CONCLUSIONS	223
5.5. REFERENCES	225
CHAPTER 6. RELEVANCE OF SURFACE TRANSPORT PHENOMENA IN MULTICOMPONENT MODEL Cu/SiO₂-ZrO₂ CATALYSTS FOR CO₂ HYDROGENATION TO METHANOL	229
6.1. INTRODUCTION	231

6.1.1. Surface transport phenomena in methanol synthesis	232
6.2. APPROACH	234
6.3. RESULTS AND DISCUSSION	235
6.3.1. Catalyst design and characterization	235
6.3.2. Catalytic performance	241
6.3.2.1. <i>Kinetic isotope effect</i>	248
6.3.3. <i>In situ</i> CO ₂ hydrogenation infrared spectroscopy	252
6.3.3.1. <i>Dynamics assessment by Modulation-Excitation DRIFT spectroscopy</i>	256
6.4. CONCLUSIONS	263
6.5. REFERENCES	266
CHAPTER 7. GENERAL CONCLUSIONS	271
APPENDIXES	277
APPENDIX I: LIST OF FIGURES AND TABLES	279
APPENDIX II: LIST OF SYMBOLS AND ACRONYMS	295
APPENDIX III: SUPPORTING MATERIAL OF CHAPTER 4	301
APPENDIX III: SUPPORTING MATERIAL OF CHAPTER 5	307
