Abstract **v**

Resumen **ix**

Resum **xiii**

Acknowledgments **xvii**

Contents **xix**

List of Figures **xxv**

List of Tables **xxix**

1 Introduction **1**

1.1 Motivation 1

1.1.1 Environmental impact and mitigation measures of transport in the EU 1

1.1.2 Situation and perspectives of urban electric buses in the EU 2

1.1.3 General challenges in the large-scale adoption of electrical buses 4

1.1.4 Contribution and importance of HVAC in the field 7

1.2 Background and research context 9

1.2.1 Overview of HVAC systems in urban electric buses 9

1.2.2 Main approaches to estimate the energy consumption of HVAC systems in urban electric buses 11

1.2.3 Detailed review of the modeling techniques employed in the present thesis 14

1.3 Identified gaps and research questions 23

1.4 Objectives 25

1.5 Scope and boundaries of the thesis 28

1.6 Structure 30

1.7 References 34

2 Development and validation in a 2D-GIS environment of a 3D shadow cast vector-based model on arbitrarily orientated and tilted surfaces 51

2.1 Introduction 56

2.2 Model Description 61

2.2.1 City Model 62

2.2.2 Shadow Model 64

2.3 Results, Model Validation, and Discussion 67

2.3.1 City Model 68

2.3.2 Shadow Model 70

2.4 Conclusions 76

2.5 Acknowledgments 78

2.6 References 79

3 Dynamic cabin model of an urban bus in real driving conditions 87

3.1 Introduction 93

3.2 Methodology 97

3.2.1 Location and climate conditions 98

3.2.2 Route and vehicle description 99

3.2.3 GIS model 100

3.2.4 Kinematic model 101

3.2.5 Climate Model 105

3.2.6 Thermal Model of the Cabin 106

3.3 Validation and Justification of Hypotheses 113

3.3.1 Validation 113

3.3.2 Justification of Hypotheses 114

3.3.3 Simulation Results 117

3.3.4 Sensitivity Analysis 121

3.4 Conclusions 124

3.5 Acknowledgments 126

3.6 References 127

4 HVAC system operation, consumption and compressor size optimization in urban buses of Mediterranean cities 137

4.1 Introduction 143

4.2 Methodology 147

4.2.1 Location and climate conditions 148
4.2.2 Route and vehicle description 149
4.2.3 GIS model 150
4.2.4 Kinematic model 151
4.2.5 Climate model 151
4.2.6 Coupled dynamic thermal and HVAC model . . 152
4.2.7 Battery model 159
4.3 Simulation results 161
4.3.1 Representative year 161
4.3.2 Extreme weather conditions 175
4.4 Optimization of the compressor size 176
4.5 Conclusions 179
4.6 Acknowledgments 182
4.7 References 183

5 Discussion of the main results 195

5.1 Discussion and justification of the modeling approach . 196
5.1.1 The total instantaneous HVAC consumption . . 196
5.1.2 Solar heat gain 198
5.1.3 Shadow models 199
5.1.4 Bus surfaces in climate model 202
5.1.5 Transient thermal model 203
5.2 Results overview 205
5.2.1 Development of the methodology 205

5.2.2 Application in buses of Valencia and key findings 207

6 Conclusions **213**

6.1 General conclusions 213

6.1.1 Development of the methodology 213

6.1.2 Application in buses of Valencia and key findings 215

6.2 Future work and research opportunities 218

6.3 Dissemination and communication of the results 220

6.3.1 Journal publications 220

6.3.2 Conferences 222

Global Bibliography **225**
